

## Conditions of use

Before each use make sure that the surface is clean, dry and free from any grease or oils. To ensure better adhesion and contact, clean the surface using the relevant solvent (RESOLVENT), using a paint brush or cotton cloth. Prior to the application shake each bottle well for at least 2 minutes. Each colour is applied into thin layers, and the process may be repeated for 2 or 3 times. The application can be done either by brush or natural sponge.

During the process, shake the colour bottles again. The final hardening of the colours will take place after 48hours, even though within minutes the colour surface looks dry.

Make sure the process take place in a well ventilated space or room and that vapours from solvents are toxic.
